AI ETHICS: SHAPING A RESPONSIBLE FUTURE

“The question is no longer whether AI will be integrated into our lives, but how we can ensure its responsible and beneficial use”

As artificial intelligence continues to transform our work and lives, Insight Magazine explores the critical balance between innovation and ethics.

As we stand on the cusp of a new era in technology, artificial intelligence continues to reshape our world at an unprecedented pace. This issue of Insight Magazine delves into one of the most critical aspects of this revolution: the ethical implementation of AI. With over 60% of professionals now using AI in their daily work, according to recent Salesforce research, we find ourselves at a critical point.

The question is no longer whether AI will be integrated into our lives, but how we can ensure its responsible and beneficial use. This month, we explore the growing importance of AI ethics – the guiding principles that shape the development and deployment of these powerful tools.

AI NOW ON AGENDA FOR APPLE AS OPENAI TO ADD CHATGPT TO SIRI

Apple has officially entered the AI business with a significant announcement at its annual world wide developers conference (WWDC) although widely expected to announce a raft of AI features surprise came when CEO Tim Cook introduced a partnership with OpenAI for ChatGPT alongside its "Apple Intelligence" suite of new on-device processing AI-powered features.

A FAST-MOVING TECH HUB THAT POWERS THE FUTURE OF AI

Taiwan companies such as Taiwan Semiconductor Manufacturing Company (TSMC) and HTC have gained global recognition for their contributions to the information technology (IT) sector. Now, companies like Nvidia and AMD are capitalizing on this success by becoming some of the most valuable companies in the world, as businesses seek to get their hands on their AI semiconductors.

HOW ARTIFICIAL INTELLIGENCE WILL CHANGE THE WORLD

Written By : Marcus Lee

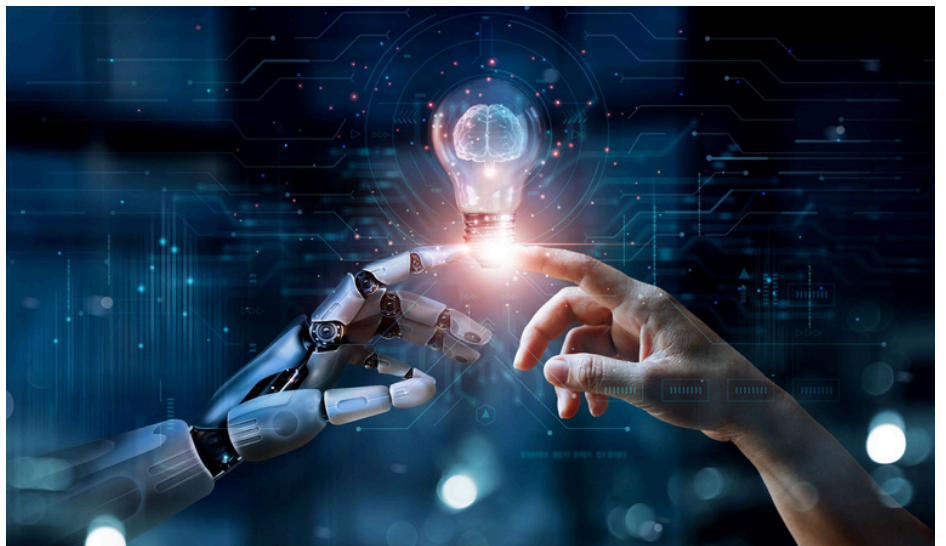

“It’s been an amazing journey, with so much more to come”

Artificial intelligence technologies continue to impact human history in almost every sector of our economy. Emerging technologies like big data, robotics, and the Internet of Things are already mainly driven by artificial intelligence (AI), and generative AI has increased both the possibilities and popularity of AI.

According to 2023 IBM poll, they found that 40% of enterprise-scale enterprises are thinking about implementing AI, and 42% of them had already integrated AI into their operations.

Furthermore, 42% of firms plan to include generative AI into their workflows, compared to 38% of organizations that have already done so. With so many changes coming at such a rapid pace,

AI has come a long way since 1951, when the first documented success of an AI computer program was written by Christopher Strachey, whose checkers program at the University of Manchester.

HOW AI WILL IMPACT THE FUTURE

Artificial intelligence (AI) has quickly evolved from a theoretical idea to a transformative force that is changing industries and civilizations all over the world. A new breed of leaders has evolved to navigate this uncharted region as firms and organizations realize more and more how AI can encourage innovation, streamline processes, and open up possibilities.

In various degrees, AI has been implemented by about 55% of enterprises, indicating that many businesses will likely see increased automation in the near future. With the popularity of chatbots and digital assistants, businesses may now use AI to manage routine customer conversations and staff inquiries.

The speed at which AI can analyze huge amounts of data and present its results in easily readable visual representations can likewise improve the decision-making process. Instead of spending time analyzing the data manually, business executives can use quick insights to make decisions that are right.

Our Service

Technology has many effects. It has helped develop more advanced economies (including today's global economy) and has allowed the rise of a leisure class. Many technological processes produce unwanted by-products known as pollution and deplete natural resources to the detriment of Earth's environment. Innovations have always influenced the values of a society and raised new questions in the ethics of technology. Examples include the rise of the notion of efficiency in terms of human productivity, and the challenges of bioethics.

Modern Technology

The use of the term "technology" has changed significantly over the last 200 years. Before the 20th century, the term was uncommon in English, and it was used either to refer to the description or study of the useful arts.

Futuristic Device

The term "technology" rose to prominence in the 20th century in connection with the Second Industrial Revolution. The term's meanings changed in the early 20th century when American social scientists, beginning with Thorstein Veblen.

Your Solution

We provide the best service

Philosophical debates have arisen over the use of technology, with disagreements over whether technology improves the human condition or worsens it.

Why Us ?

We provide the best service

Technology has many effects. It has helped develop more advanced economies (including today's global economy) and has allowed the rise of a leisure class. Many technological processes produce unwanted by-products known as pollution and deplete natural resources to the detriment of Earth's environment. Innovations have always influenced the values of a society and raised new questions in the ethics of technology. Examples include the rise of the notion of efficiency in terms of human productivity, and the challenges of bioethics.

SPEAKS WITH NABIL BUKHARI

written by: Amber Jackson

INSIGHT Magazine speaks with Nabil Bukhari, Chief Technology and Product Officer at Extreme Networks, about building enterprise trust in AI to spark innovation.

A self-proclaimed humanist and futurist, Nabil is a business leader with a passion for democratizing technology. His role at Extreme Networks sees him lead company strategy to drive an ever-improving experience for customers.

Q: HOW HAS YOUR ROLE CHANGED DURING AND BEYOND THE COVID-19 PANDEMIC? WHAT CHANGES DO YOU SEE MOVING FORWARD?

» My role at Extreme Networks has changed a lot. I've been with the company for almost five years. I wear multiple different hats right now as Chief Product Officer and Chief Technology Officer. I'm also the general manager of our subscription business and that's really the biggest change – not just for me, but for the future of technology leaders. We have reached a turning point with software-as-a-service (SaaS) and cloud and subscription models and different commercial models. Now, business leaders must understand technology, human impact and commercials and business.

Q. EXTREME NETWORKS HAS ANNOUNCED PLENTY THIS YEAR. HOW WILL THESE NEW OFFERINGS IMPROVE CONNECTIVITY IN THE LONG-TERM?

» Human impact and technology must be delivered to improve that human condition and to enable those human experiences. So that's the first and foremost thing. Now, in that context, that is exactly what we announced. It goes into three layers. One is connectivity, the second one is security and the third one is management.

Q. HOW DO YOU SEE THESE NEW TECHNOLOGIES – AI, CLOUD, NETWORKING – HELPING TO DIGITALLY TRANSFORM YOUR CUSTOMERS MOVING FORWARD?

» The best way to talk about AI is to not talk about AI. So, let's take an example from real life. So, if I want to find something about my company or any general topic, there's no single person that I can go to and they can give me all of the answers. I'll get information from multiple different places. AI is no different. No single vendor has all of the data that can give you that insight that you really require. That's the reason why ecosystems are so important. When you connect everything together, you get more comprehensive insights and AI can then generate more deployable plans.

NABIL BUKHARI

TITLE: CHIEF TECHNOLOGY AND PRODUCT OFFICER, EVP/GM SUBSCRIPTION BUSINESS

COMPANY: EXTREME NETWORKS

INDUSTRY: NETWORKING

LOCATION: UNITED STATE

Q. ONE OF YOUR UPDATES IN JUNE 2024 WAS ABOUT EXTREMELABS. PLEASE TELL US ABOUT THIS.

» Whereas Extreme AI Expert is a tech preview by our Extreme Labs group rather than our product group, Extreme Labs is our incubation center. It's the innovation center. It's always working on newer technologies. We've had it for a while, but we have never really exposed it externally. We thought that it would be really useful to engage our customers and partners in that innovation process before it gets productized.

liquidstack°

Leading the Way in Sustainable Liquid Cooling

LiquidStack is a global leader in sustainable data centre cooling solutions. Since 2012, the company has been pioneering liquid cooling technologies, revolutionising high-compute workloads like AI training. Partnering with Trane, LiquidStack ensures efficient and eco-friendly cooling, making data centres greener and more effective.

Discover how LiquidStack's innovative liquid cooling solutions can transform your data centre operations. Visit our website today to learn more and join the future of sustainable data centre cooling.

PROJECTED MARKET SIZE OF AI

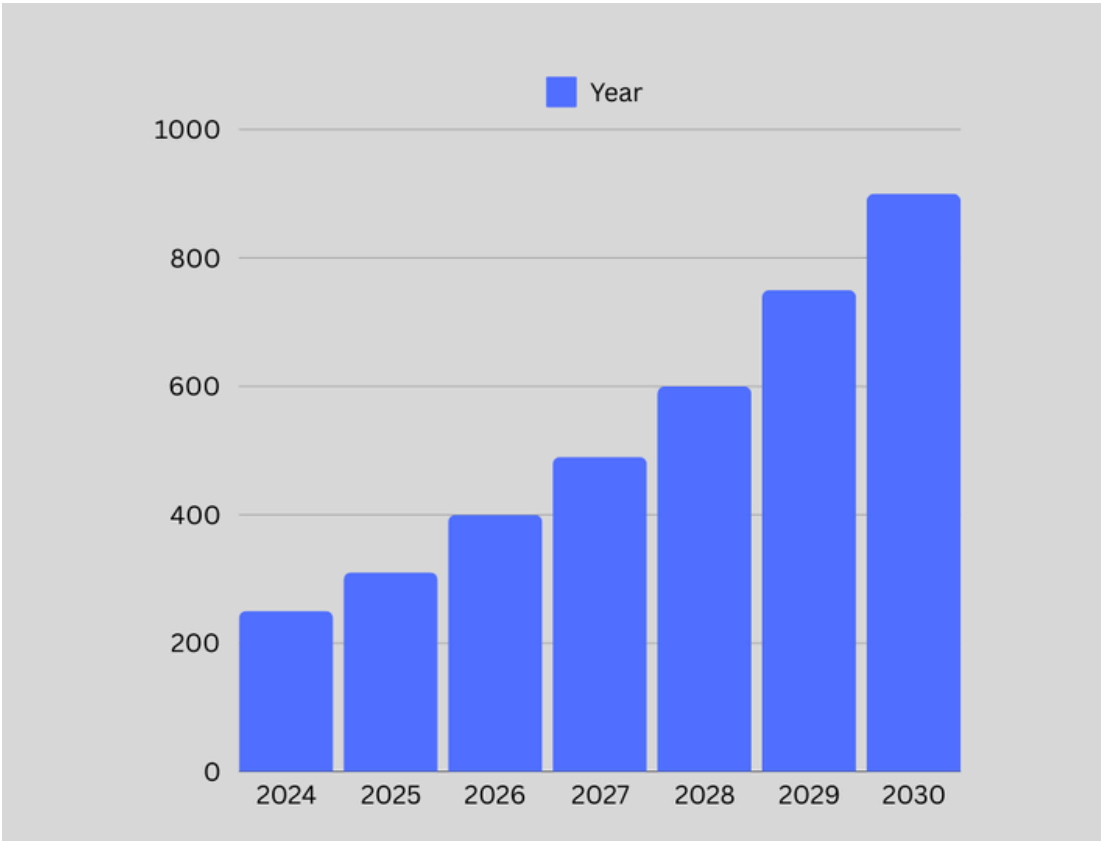

The projected market size of artificial intelligence (AI) refers to the expected revenue generated by AI technologies and applications over a specific period. AI is increasingly being adopted across multiple industries, including healthcare, finance, retail, manufacturing, transportation, and education.

The height of each bar corresponds to the projected market size for that specific year. The bars increase in height as the years progress, indicating a consistent growth in the AI market.

In 2024 the market size is projected to be around \$250 billion. An increase to approximately \$310 billion in 2025, indicating a growing adoption and investment in AI technologies. In 2026 the market size could reach around \$400 billion, reflecting a steady upward trend.

Advancements and wider implementation of AI solutions rise to \$490 billion in 2027. The market could expand to \$600 billion as AI becomes more integrated into various sectors in 2028. In 2029 a significant increase to \$750 billion, showcasing the accelerating growth of the AI industry. It is a more than in 2028. The highest value of the market size is projected to reach in 2030 and it is around \$900 billion, highlighting the rapid evolution and impact of AI technologies.

Overall, the chart shows a strong upward trend in the AI market size, reflecting the rapid growth and expansion expected in the industry over the next few years. This is consistent with the general predictions that AI will continue to integrate deeply into various sectors, driving significant economic value.
